

NEWTON ABBOT RACECOURSE

Devon, United Kingdom

SYSTEM **ARDEX**
PREMIUM PERFORMANCE

Ardex, pioneers in the development and manufacture of high performance flooring products, provided the ideal products for the job to assist in the refurbishment of the Tote area at Newton Abbot Racecourse.

As the Tote area is one of the most highly populated and trafficked areas of the racecourse on a busy race day, it was essential that the sub-floor provided a smooth, flat and hard surface ready to receive the marmoleum floor finish.

ARDITEX and a damp proof membrane system were specified. The components of the system combine to provide all the necessary elements required to fulfil the brief. The benefits of this system have been consistently proven for over twenty years throughout a large number of successful installations.

The 1000m² project commenced with the existing concrete pavers being pre-smoothed with the award winning **ARDITEX** smoothing compound. **ARDITEX** is a universal, latex-based sub-floor smoothing compound, which is self-smoothing and can be used under a damp proof membrane. A damp proof membrane was then applied to the newly smoothed surface. A final 3mm layer of **ARDITEX** was applied to provide a quality finish ready to receive the marmoleum flooring within the timescale required.
