

SCIENCE CENTRE QUEENSLAND MUSEUM

Brisbane QLD, Australia

SYSTEM**ARDEX**
PREMIUM PERFORMANCE

INSTALLER:

River City Floors, M&M Waterproofing, Tilecorp

ARCHITECT:

Robin Gibson & Partners

The new Sciencentre is designed to capture the imagination and spread the message about science and technology. It also illustrates Ardex's range of compatible technologies.

This \$9.5 billion redevelopment, which opened on 17 September 2004, is the first major facelift for the Queensland Museum in almost 20 years.

Ardex products were used for various applications, from waterproofing, to floor levelling and tiling.

For a striking looking floor, 750x750x20mm travertine was chosen. Being larger than conventional floor tiles, these required an adhesive that would provide a solid base and stand up to the weight of the tile. Owing to the unique "non lip" characteristic, Robin Gibson & Partners specified Ardex **STS 8** (with **Ardion 90**).

In the rooms that were to be covered with vinyl, the floors were made smooth and level using Ardex **K15** and Feather Finish. The RapidDry technology in **K15** allowed the installation of vinyl after a mere 16 to 18 hours.

WPM 002 was used in internal wet areas, and **WPM 3000X** in basements to help resist water ingress.
